

Configuring the Cmore iPhone Remote Access App

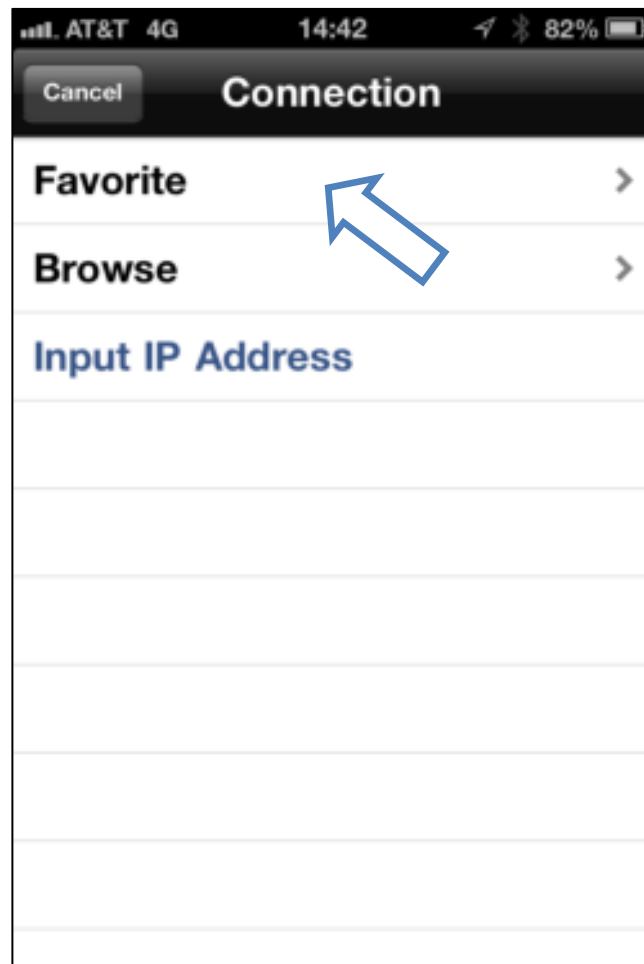

1. Search for "Remote HMI" on the Apple App Store. Tap on the price to purchase the app.

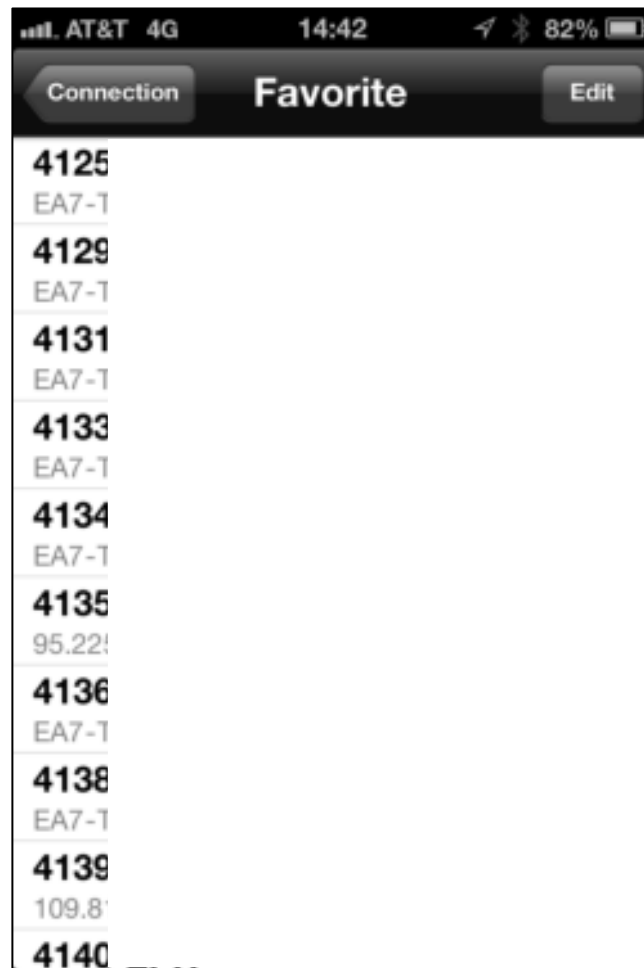

2. Once the app has installed, locate it on the iPhone, and tap to open it.

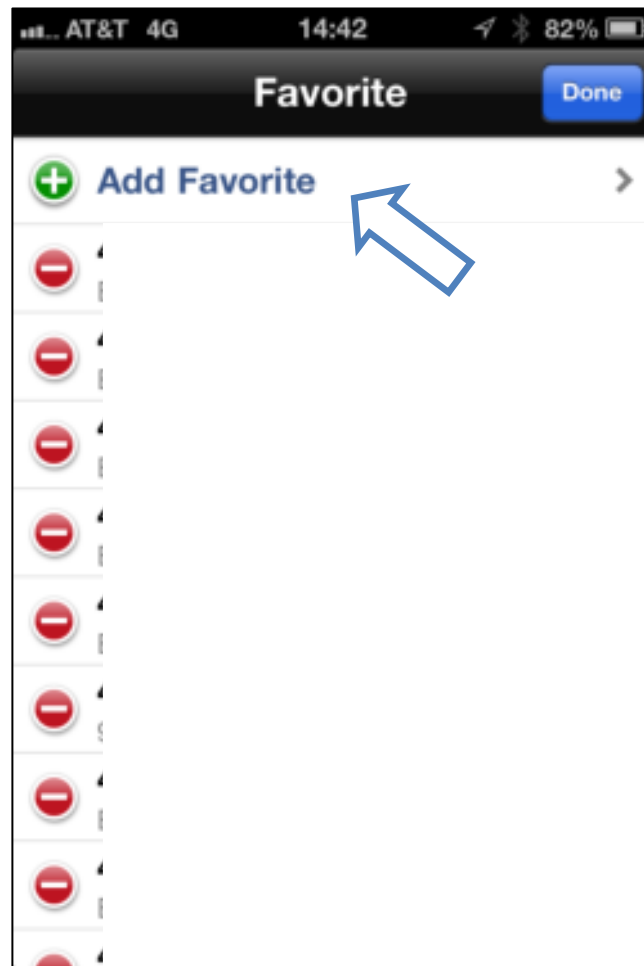

3. The main screen of the app is shown below. The “Browse” option is not supported by the Power+ Generator. Tap “Favorite”.

4. When the app is first installed, the favorites list will be blank. Tap "Edit".

5. To create a new machine connection, tap “Add Favorite”.

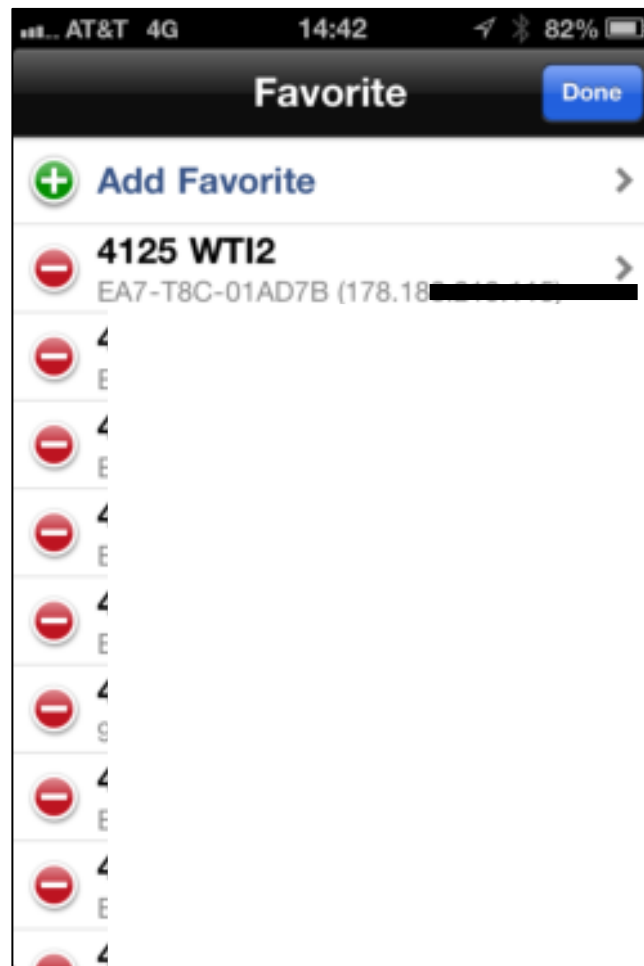

6. In the Add Favorite Screen, you will be prompted for the name and IP address of the machine. You can name it whatever you want, but you must input the IP address supplied by ElectraTherm. The default Port does not need to be changed.

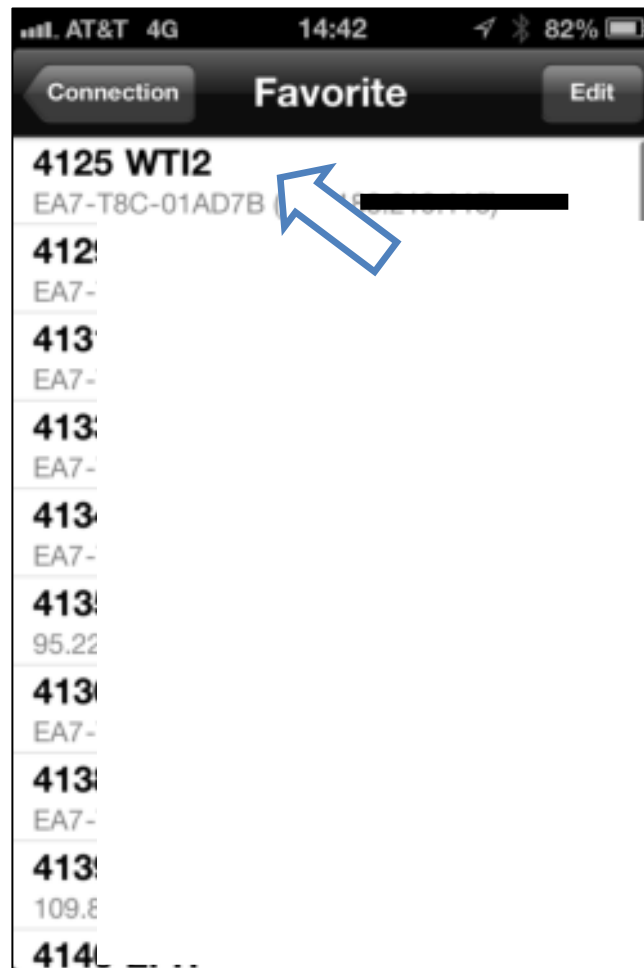

7. After typing the IP address, scroll the screen down to the password entry. Enter the username and password supplied by ElectraTherm, and tap "Register password" to switch it ON.

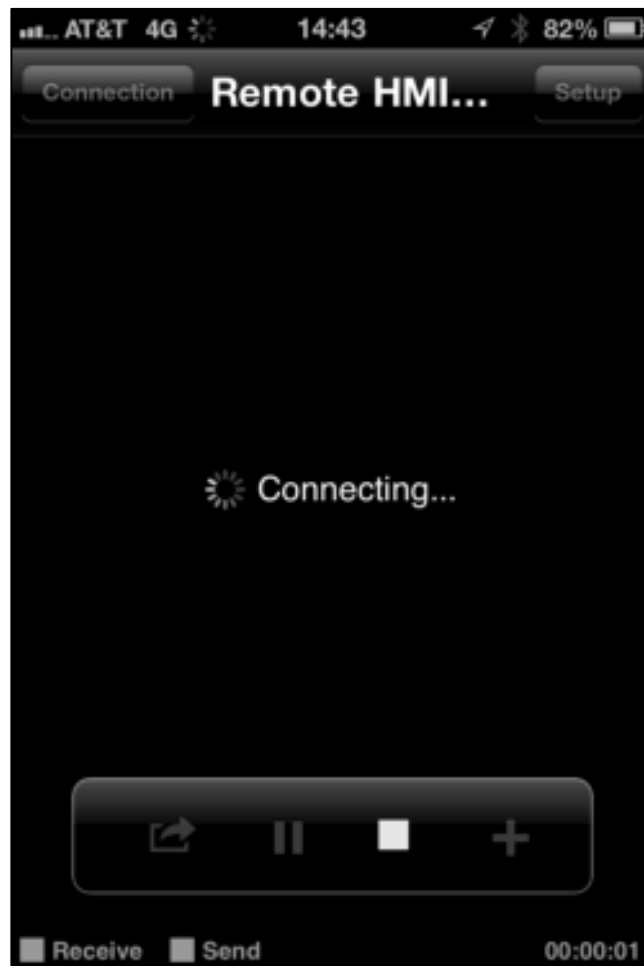

8. The newly-created machine connection will now appear on the Favorite menu. Tap "Done".

9. To connect to the machine, simply tap its name.

10. This screen will appear, indicating that the app is connecting to the Power+ Generator

11. This is the Cmore Control screen. You can use your iPhone's standard functions to scroll and zoom. To activate screen buttons, hold the "Unlock" button and tap the screen.
